PREFACE TO SECOND EDITION.

In response to many kind suggestions, Chapter X has been re-written and devoted chiefly to a discussion of the principles of cavity preparation. The sections in the other chapters dealing with this subject have been left unaltered.

In view of the great increase in the employment of local anæsthesia in conservative dentistry at the present time, the chapter on Pain Saving has been expanded and largely re-written, and it is hoped that the methods the author has himself found useful will be of service to others.

J. B. P.
